

MultiStick PODCASTING CASE

January 2013

NEW

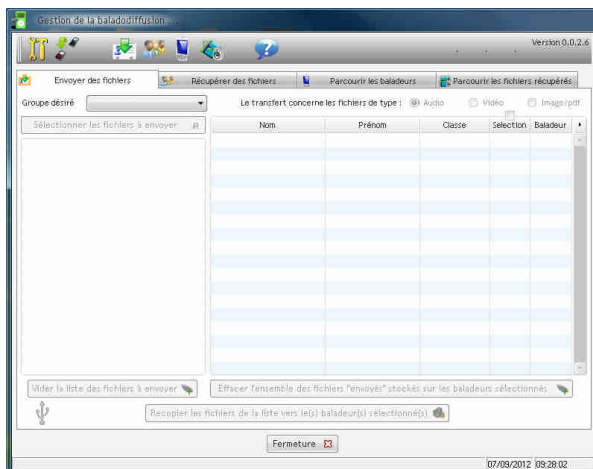

A software solution

The components of this case can distribute and collect audio content in MP3 format on audio players.

Unlike existing hardware solutions consisting in autonomous duplicators, the proposed software solution allows a higher flexibility in the managing of MP3 players sets and without sacrificing transfer speed due to performances of current computers.

The specific USB hub used is available with a USB keys management software developed by the French Ministry of Education.

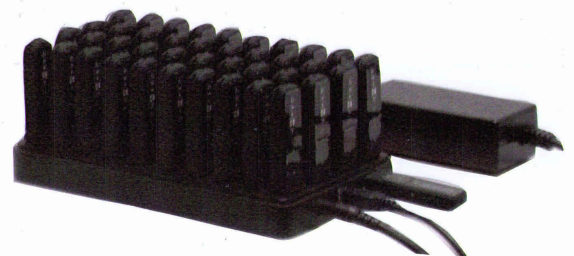

Trendy MP3 Player

The case includes 40 high fidelity MP3 players (plus one for the teacher) with many features:

- Energy System Black Shadow Model**
- 8 GB of internal memory
- Built-in microphone
- MP3 and WMA formats
- Folder navigation

A dedicated USB Hub

This hub has 40 USB ports on the upper side and two additional ports on the back side; it has three status indicators on the front side:

- indication of a default (red)
- indication of current key connection (yellow)
- indication of computer operational connection of all inserted keys (green).
