

MultiKey USB KEYS DUPLICATOR

January 2013

NEW

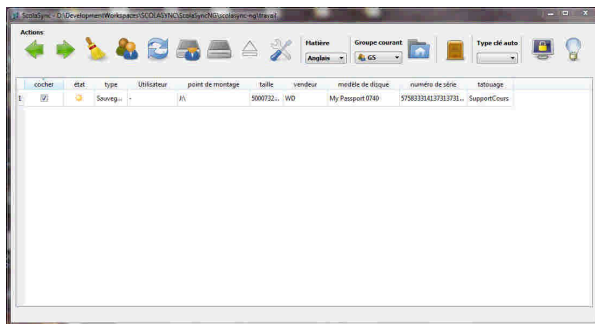

A Software solution

This set allows to broadcast and to collect files on USB Keys.

Unlike existing hardware solutions consisting in autonomous duplicators, the proposed software solution allows a higher flexibility in managing of keys set, without sacrificing transfer speed due to performances of current computers.

The specific USB hub used is available with a USB keys management software developed by the French Ministry of Education, like Scolasync.

Capless USB Keys

The set presented in this case includes 40 Kingston DataTraveler® SE9 USB Keys with a capacity of 8 GB (others capacities in option) under the shape of a small-scale metal case, capless, with a large ring to attach it easily.

The really durable case allows users to take safely this key wherever they go.

A dedicated USB Hub

This hub has 40 USB ports on the upper side and two additional ports on the back side; it has three status indicators on the front side:

- indication of a default (red)
- indication of current key connection (yellow)
- indication of computer operational connection of all inserted keys (green).
